DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

2. Claim 1, 2 and 7 are rejected under 35 U.S.C. 102(e) as being anticipated by Maeda (US 6384512).

Maeda discloses a piezoelectric actuator drive circuit comprising:

a charge/discharge circuit (3) section for charging and discharging a piezo-stack

(INJ 1) mounted on a piezoelectric actuator (Column 1, Lines 12-14);

a pair of positive and negative connection terminals connected to a current supply cable that extends to the piezo-stack; and

an abnormality detection circuit (41) section for detecting a conduction abnormality of the current supply cable, wherein the abnormality detection circuit section includes:

a voltage detection means (Column 5, Lines 45-65); and

a comparison means (Column 6, Lines 44-51) for comparing a detected voltage with a reference voltage for supplying a comparison signal.

3. With regards to claim 2, Maeda discloses the abnormality detection circuit section includes a counting means for counting a number of times when the detected voltage exceeds the

Art Unit: 2834

reference voltage between a charge command and a discharge command of the piezo-stack.

(Column 6, Lines 44-51)

4. With regards to claim 7, Maeda discloses an injector that switches between injecting and stopping of fuel by opening or shutting a nozzle by means of the piezoelectric actuator; and a piezoelectric actuator drive circuit for driving the piezoelectric actuator.

Allowable Subject Matter

5. Claims 3-6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892.
